SUBJECT INDEX (Vol. 52)

Adaptive control
  for class of non-linear systems with application to robotics, 77
  in the presence of markovian parameter jumps, 473
  unified, non-minimum-phase systems, target tracking and dynamic compensation, 423
Adaptive feedback control, application of continuous-time weighted least-squares algorithm, 917
Adaptive force control of robot manipulators, 37
Adaptive stabilization and resonance suppression, 725
Adaptive suboptimal filtering of bilinear systems, 135
Algorithm
  continuous-time weighted least-squares, application to adaptive feedback control, 917
  for non-square internal model control systems, 119
  iterative learning control systems, 833
  large-scale system, decentralized hierarchical estimation, gain transfer, 279
  recursive, to compute generalized frequency response functions for non-linear integro-differential equations, 863
Approximation and identification of continuous-time systems, 669
ARMA processes, strong consistency of predictive least squares structure criterion, 737

Bezout identities, common minor zeros, of 2-D polynomial matrices, applications to time-delay systems, 1311
Bilinear systems, adaptive suboptimal filtering, 135
Boundedness of oscillations in relay feedback systems, 1273
Bounding the states of systems with unknown-but-bounded disturbances, 881

Causality in frequency domain, 251
Compensators, anti-windup class, inherent observer property, 705
Continuous-time systems, approximation and identification, 669
Control law, variable structure, time-sub-optimal, 655
Control of reverse-reaction processes via pseudo-predictor, 261
Control patterns, arbitrary, in discrete event systems, feedback logic, 159
Controller
  adaptive, stabilization and resonance suppression, 725
  deadbeat, minimum-time output, parametrization, for all classes of invertible systems, 641
  multirate-output type, generalized, 597
  multivariable, performance improvement using time delays in design, 1455
  observations-weighted, for single-input single-output stochastic systems using a perturbed-type dual criterion, 1019.
  PD-type, stability, for robot manipulator trajectory tracking, 581
  projective, strictly proper, for disturbance attenuation, 963
  reduced-order, new design method, 1065
  single-mode, design of single-link flexible manipulator under gravity, 101
Convergence analysis of linear dynamical systems by high gain and high dynamic compensation, 1147
Convergence of a class of Padé approximations for delay systems, 989
Critical systems, frequency-domain approach, 1507

Decentralized feedback control of large-scale linear continuous systems, 1371
Decentralized variable structure control for tracking in non-linear systems, 811
Decidability for a temporal logic used in discrete-event system analysis, 1489
Descriptor systems, linear, dynamical order assignment, 175
Design
  composite feedback control for class of non-linear singularly perturbed systems with fast actuators, 571
  MIMO servo, by the split control method, 457
  multivariable controller, performance improvement using time delays, 1455
  PI-type state feedback optimal servo system, 613
  reduced-order controller, new method, 1065
  reduced-order optimal estimators, directly in the frequency domain, 1017
  servo-regulator-type multivariable control systems including feedforward compensation, 1189
  sliding-mode controller, of single-link flexible manipulator under gravity, 101
Deterministic linear system, non-minimum phase, unified adaptive control, 423.
Digital PLL-based control with Åström–Hägglund tuning, 227
Discrete-event system analysis, temporal logic decidability, 1489
Discrete event systems with arbitrary control patterns, feedback logic, 159
Discrete-time H^∞ algebraic Riccati equation, relationship between three solutions, 801
Discrete-time system, with normalized stable factor perturbation, robust stabilizability, 441
Distributed parameter non-linear systems, identification via orthogonal functions, 795
Distributed parameter systems, robust finite time settling control, 1425
Disturbance attenuation, strictly proper projective controller, 963

Disturbances, unknown but bounded, of systems the states of which must be bounded, 881
Dynamic programming, application to high-dimensional non-linear optimal control problems, 239
Dynamical order assignment for linear descriptor systems, 175

Equations, integro-differential, non-linear, mapping into the frequency domain, 863
Estimation, of state, for non-linear uncertain systems, design based on properties related to uncertainty bound, 1131
Estimator, optimal, reduced-order, design directly in the frequency domain, 1017
Estimators, reduced-order, optimal, in frequency domain, discrete-time case, 1051

Factorization approach, link with MIMO robust adaptive control, 1391
Factorization, spectral, and LQ-optimal regulation for multivariable distributed systems, 55
Feedback canonical form for singular systems, 347
Feedback control
  adaptive, application of continuous-time weighted least-squares algorithm, 917
  composite, for class of non-linear signularly perturbed systems with fast actuators, 571
  linear decentralized control systems, algebraic approach, 1371
  reverse-reaction processes via pseudo-predictor, 261
Feedback logic for discrete event systems with arbitrary control patterns, 159
Feedback system stability, partial integrity, 509
Feedforward control of disturbance in multivariable feedback control systems, 377
Filtering, adaptive suboptimal, of bilinear systems, 135
Frequency domain approach for critical systems, 1507
Frequency domain causality, 251
Frequency response functions, non-linear, interpretation, 319
Frequency structure-preserving transformations, infinite, for general polynomial system matrices, 1

Gain, high-frequency, of unknown sign, first-order plant fast adaptive stabilization, 499

H^∞-control and model reduction, parametric interpolation, 293
H^∞-optimal solutions of robust regulator problem for linear MIMO systems, 1241
H^∞ robust controller for self-tuning applications, implementation, 15
Hierarchical control, complex industrial processes, augmented model-based double iterative loop techniques, 549
High-dimensional non-linear optimal control problems, application of dynamic programming, 239

Identification
  and approximation of continuous-time systems, 669
  NARMAX models using radial basis functions, 1327
  non-linear distributed parameter systems via orthogonal functions, 795
Implicit differential systems, non-linear functions and stability of motion, 1167
Implicit linear discrete-time systems, Kalman-type decomposition, applications, 1263
Industrial processes
  complex, hierarchical control, augmented model-based double iterative loop techniques, 549
  steady-state, stochastic optimizing control, improved solution approach, 517
Infinite frequency structure-preserving transformations for general polynomial system matrices, 1
Information criteria for model-structure selection, strong consistency of predictive least squares criterion, 737
Internal model control systems, non-square, algorithm, 119
Interpolation of 1st- and 2nd-order information, minimal realizations of multivariable linear stable discrete-time systems, 689
Invertible systems, all classes, parametrization of minimum-time output deadbeat controllers, 641

Kalman-type decomposition for implicit linear discrete-time systems, and applications, 1263

Learning control systems, iterative, two-dimensional model and algorithm analysis, 833
Linear descriptor systems, dynamical order assignment, 175
Linear multivariable systems, order reduction by special coordinate basis, 191
Linear quadratic problem in terminal control, support problem method for solution, 1475
Linearization, statistical, comparative study, 1083
LQ-optimal regulation and spectral factorization for multivariable distributed systems, 55
Lyapunov function, Lur'e-type, for multimachine power systems with transfer conductances, 1009

Manipulator, single-link, flexible, under gravity, sliding-mode controller design, 101
Manipulators, robotic, adaptive force control, 37
Mapping non-linear integro-differential equations into the frequency domain, 863
Markovian parameter jumps, adaptive control, 473

Matrices, 2-D polynomial, Bezout identities and common minor zeros, applications to time-delay systems, 1311
MIMO robust adaptive control, link with factorization approach, 1391
MIMO servo design by the split control method, 457
Model reduction
and H^∞-control, parametric interpolation, 293
moment-matching, for multirate linear systems, 1279
Model structure selection, information criteria
bayesian model order estimation, 389
shortest data description modelling, 409
strong consistency of predictive least squares criterion, 737
Model, two-dimensional, iterative learning control systems, 833
Modelling, industrial linear repetitive process, and stability analysis, 265
Multirate linear systems, moment-matching model reduction, 1279
Multivariable control system
phase margins, 485
steady-state closed-loop structural interaction analysis, 1351
Multivariable distributed systems, spectral factorization and LQ-optimal regulation, 55
Multivariable feedback control systems, feedforward disturbance control, 377
Multivariable linear stable discrete-time systems, minimal realizations interpolating 1st- and 2nd-order information, 689
Multivariable linear systems, order reduction by special coordination basis, 191

NARMAX model identification using radial basis functions, 1327
Nested feedback loop decomposition by special coordinate basis, 191
Non-linear distributed parameter systems, identification via orthogonal functions, 795
Non-linear functions and stability of motions of implicit differential systems, 1167
Non-linear optimal high-dimensional control problems, application of dynamic programming, 239
Non-linear singularly perturbed systems with fast actuators, composite feedback control, 571
Non-linear system tracking, decentralized variable structure control, 811
Non-linear systems with application to robotics, adaptive control, 77
Non-square internal model control systems, algorithm, 119

Observer based control of uncertain systems with non-linear uncertainties, 1107
Observer design for state estimation of non-linear uncertain systems, 1131
Observer property, inherent in class of anti-windup compensators, 705
Optimal reduced-order estimators in the frequency domain, discrete-time case, 1051
Order assignment, dynamical, for linear descriptor systems, 175
Order reduction of linear multivariable systems by special coordinate basis, 191
Oscillations in relay feedback systems, boundedness, 1273

Padé approximations for delay systems, convergence, 989
Parametric interpolation, H^∞-control and model reduction, 293
Parametrization of minimum-time output deadbeat controllers for all classes of invertible systems, 641
PD controller stability, for robot manipulator trajectory tracking, 581
Performance improvement using time delays in multivariable controller design, 1455
Phase-locked-loop-based digital control with Åström–Hägglund tuning, 227
Phase margins for multivariable control systems, 485
PLL-based digital control with Åström–Hägglund tuning, 227
Polynomial matrices, infinite frequency structure-preserving transformations, 1
Polynomial optimization of stochastic continuous-time control for unstable plants, 1035
Power system, multimachine, with transfer conductances, Lur'e-type Lyapunov functions, 1009
Pseudo-preductor in control of reverse-reaction processes, 261

Regulator problem, robust, H^∞-optimal solutions for linear MIMO case, 1241
Regulators, linear quadratic, optimality, generalized robustness, 1277
Relay feedback systems, boundedness of oscillations, 1273
RELION, time-sub-optimal variable structure control law, 655
Reverse-reaction processes, control via pseudo-predictor, 261
Riccati equation approach to maximizing the complex stability radius by state feedback, 769
Riccati equation, discrete-time, H^∞, relationship between three solutions, 801
Robot manipulators, adaptive force control, 37
Robot motion tracking, robust control, 581
Robot, robust trajectory following using computed torque structure with VSS, 935
Robotics, adaptive control of class of non-linear systems, 77
Robust control for tracking robot motion, 581
Robust finite time settling control of distributed parameter systems, 1425
Robust H_∞ self-tuning controller, implementation, 15
Robust stability and performance of systems with structured and bounded uncertainties, extension of guaranteed cost control approach, 627

Robust stabilizability of discrete-time systems with normalized stable factor perturbation, 441
Robust trajectory following of robots using computer torque structure with VSS, 935
Robustness and ρ-stability, discrete-time case, 1217
Robustness with real parametric and structured complex uncertainty 753

Self-tuning H_∞ robust controller implementation, 15
Servo, MIMO, design by the split control method, 457
Servo-regulator-type multivariable control system including feedforward compensation, Wiener–Hopf design, 1189
Servo system, optimal, using PI-type state feedback, design, 613
Singular systems, feedback canonical form, 347
Sliding-mode controller design of single-link flexible manipulator under gravity, 101
Spectral factorization and LQ-optimal regulator for multivariable distributed systems, 55
ρ-Stability and robustness, discrete-time case, 1217
Stability
  analysis, industrial linear repetitive process, and modelling, 265
  feedback system, partial integrity, 509
  motions and non-linear functions of implicit differential systems, 1167
  radius, complex, maximizing by state feedback, Riccati equation approach, 769
  PD controller for robot manipulator trajectory tracking, 581
  robust
    systems with structured and bounded uncertainties, guaranteed cost control approach, 627
    with real parametric and structured complex uncertainty, 753
Stabilization
  adaptive, and resonance suppression, 725
  fast, adaptive, of first-order plant with unknown sign of the high-frequency gain, 499
Statistical linearization, comparative study, 1083
Steady-state closed-loop structural interaction analysis, 1351
Stochastic continuous-time control of unstable plant, polynomial optimization, 1035
Stochastic optimizing control, steady state industrial processes, improved solution approach, 517
Stochastic system, single-input single-output, observations-weighted controllers using perturbed-type dual criterion, 1019
Suboptimal adaptive filtering of bilinear systems, 135

Temporal logic decidability in discrete-event system analysis, 1489
Terminal control, method of support problems for solving linear-quadratic problem, 1475
Time-delay system, Bezout identities and common minor zeros of 2-D polynomial matrices, 1311
Tracking non-linear systems, decentralized variable structure control, 811
Transformations that preserve infinite frequency structure, for general polynomial system matrices, 1

Uncertain systems
  non-linear, state estimation design based on uncertainty bound properties, 1131
  with non-linear uncertainties, observer-based control, 1107
Uncertainties, structured and bounded, of linear system, robust stability, guaranteed cost control approach extension, 627
Uncertainty, complex, structured and real parametric, robustness, 753

Wiener–Hopf design of servo-regulator-type multivariable control systems including feedforward compensation, 1189
Wind turbine control, 1295
